

Timesheet Logger PWA - Installation Guide

What You Have

You now have all the files needed to create a fully installable Progressive Web App (PWA):

1. **index.html** - The main application file
2. **manifest.json** - PWA configuration file
3. **service-worker.js** - Enables offline functionality
4. **icon-192.png & icon-512.png** - App icons (you'll need to create these)

Creating App Icons

You need two icon files. Here are your options:

Option 1: Online Icon Generator (Easiest)

1. Go to <https://www.favicon-generator.org/> or <https://realfavicongenerator.net/>
2. Upload your company logo
3. Generate icons and download
4. Rename them to `icon-192.png` and `icon-512.png`

Option 2: Create Manually

- Create two PNG images:
 - **icon-192.png**: 192x192 pixels
 - **icon-512.png**: 512x512 pixels
- Use your company logo or a clock/timesheet icon

Deployment Options

Option A: GitHub Pages (FREE & Easy - Recommended)

1. **Create a GitHub Account** (if you don't have one)
 - Go to <https://github.com/signup>
2. **Create a New Repository**
 - Click the "+" icon → "New repository"
 - Name it: `timesheet-logger`
 - Make it Public
 - Click "Create repository"

3. Upload Your Files

- Click "uploading an existing file"
- Drag and drop all files:
 - index.html
 - manifest.json
 - service-worker.js
 - icon-192.png
 - icon-512.png
- Click "Commit changes"

4. Enable GitHub Pages

- Go to repository Settings
- Scroll to "Pages" section
- Under "Source", select "main" branch
- Click "Save"
- Wait 2-3 minutes

5. Your App is Live!

- Your URL will be: <https://YOUR-USERNAME.github.io/timesheet-logger>
- Share this URL with your technicians

Option B: Netlify (FREE & Super Simple)

1. Go to Netlify

- Visit <https://www.netlify.com/>
- Click "Sign up" (can use GitHub account)

2. Deploy Your Site

- Click "Add new site" → "Deploy manually"
- Create a folder on your computer with all 5 files
- Drag the entire folder into Netlify
- Wait 30 seconds

3. Your App is Live!

- Netlify gives you a URL like: <https://random-name-12345.netlify.app>
- You can customize this in Site settings

Option C: Vercel (FREE & Fast)

1. Go to Vercel

- Visit <https://vercel.com/>
- Click "Sign Up" (can use GitHub)

2. Deploy

- Click "Add New" → "Project"
- Drag and drop your folder with all files
- Click "Deploy"

3. Done!

- Get your live URL instantly

Installing on Android

Once your app is live:

1. **Open the URL in Chrome** on your Android device
2. Chrome will show an "Install" banner at the bottom
 - OR tap the menu (⋮) → "Install app"
3. The app will be added to your home screen
4. It works like a native app!

Testing Locally First

Before deploying, you can test locally:

1. Install a Local Server

- Install Python (if you don't have it)
- Or use VS Code with "Live Server" extension

2. Run Local Server

```
bash
```

```
# If using Python:
```

```
python -m http.server 8000
```

```
# Then open: http://localhost:8000
```

3. Test the App

- Make sure everything works
- Test on your phone by connecting to your computer's IP

Important Notes

- **HTTPS Required:** The app **MUST** be served over HTTPS for:
 - PWA installation to work
 - Geolocation to work properly
 - All the hosting options above provide HTTPS automatically
- **Service Worker:** The service worker enables:
 - Offline functionality
 - Faster loading
 - App-like experience
- **Updates:** When you update files:
 - Simply replace the files on your hosting service
 - Users will get the update next time they open the app

Quick Start (Fastest Method)

1. Create icons (192px and 512px)
2. Go to Netlify.com
3. Sign up (free)
4. Drag all 5 files into Netlify
5. Share the URL with your team
6. Install on Android phones

Need Help?

Common issues:

- **App won't install:** Make sure you're using HTTPS
- **Location not working:** User must grant permission in browser
- **Export not working:** Check browser console for errors

You're Done!

Your timesheet logger is now:

- ✓ Fully installable on Android
- ✓ Works offline
- ✓ Professional looking

- ✓ Free to host
- ✓ Easy to update

Share the URL with your technicians and they can install it like any other app!
